

Bankstown Council streamlines their IT with Microsoft® Windows Server® 2008

In the past, Bankstown Council relied on a mix of diverse operating systems, platforms and databases.

Deciding it was time for a more streamlined solution, the Council teamed up with OSS Infotech, a Microsoft Gold Certified Partner.

OSS Infotech recommended that Council implement key technology to achieve a more consolidated infrastructure: Microsoft Windows Server, Microsoft SQL Server® and Microsoft Exchange®. They also recommended streamlining the Microsoft Office Suite across the desktop, and incorporating improved security protection.

Recently, OSS Infotech undertook a proof of concept for utilising Microsoft Windows Server 2008 and Microsoft SQL Server 2008 – as well as for a Custom Application using Visual Studio® 2008 and Microsoft Exchange 2007.

The implementation of this new, streamlined approach planned for next financial year, means Council can take advantage of these new technologies to make their infrastructure more robust, better performing and secure. Council employees can also now easily share information and documents, improving overall business efficiency.

"The Windows Server 2008 products are easier to manage and by using the central point of management for virtualisation and consolidation, you can have a bird's eye view of your whole infrastructure."

Om Saini – OSS Infotech

HEROES HAPPEN {2008}
