Cybersecurity experts on your side

Independence, integrity, insight, expertise: these are the pillars on which ESET builds its award-winning cybersecurity solutions.

As one of very few private global IT security companies, we're proud to be owned by true security enthusiasts, the architects of our first software. Empowered by their vision, without pressure from investors, we have complete freedom to make the right choices for the ultimate protection of our customers. That freedom is one of key factors behind more than 20 years of consistent revenue growth and global expansion.

Being based in the European Union, we adhere to the strictest regulations, but the root of ESET's integrity lies in its culture. We have always believed that security cannot exist without clients' trust. We earn it with responsible industry practices, full transparency and a stubborn resistance to exploit trendy buzzwords. Our experts share their research at universities, global

conferences and via our industry-leading security blog, welvesecurity.com. Although we partner with law enforcement to combat cybercrime, regardless of its origin, we are not beholden to anyone – neither governments, intelligence agencies, powerful organizations nor individuals.

Instead of listening to self-entitled authorities, we have made it our rule to always listen to the customer. You are our inspiration. Your needs provide our direction. So, even though we are completely independent, what we create depends on **you**.

Profound insight, combined with research assembled at 13 global R&D centers and human-trained machine learning, enables our experts to create multilayered technology that sets new quality standards for the protection of even the largest organizations.

All this, because we are **always on your side**.

For more than 30 years, we've been helping organizations and people protect their digital world. From a small dynamic company we've grown into a digital brand. Many things have changed, but our core aspirations, philosophy and values remain the same – to build a more secure digital world where organizations and people everywhere can truly Enjoy Safer Technology.

Richard Marko, Chief Executive Officer, ESET

ESET was named the only Challenger in Gartner's 2019 Magic Quadrant for Endpoint Protection

GARTNER'S ASSESSMENT WAS BASED ON ESET'S COMPLETENESS OF VISION AND ABILITY TO EXECUTE.

"In our view, to be named the only Challenger in the Gartner Magic Quadrant last year was a huge achievement for ESET; to have received the recognition for a second year running proves our determination to continue to deliver the best in endpoint protection, detection and response to enterprises."

Ignacio Sbampato
Chief Business Officer at ESET

In 2019 Magic Quadrant for Endpoint Protection Platforms, Gartner states that they evaluated solutions with an emphasis on hardening, detection of advanced and fileless attacks, and response capabilities, favoring cloud-delivered solutions that provide a fusion of products and services.

At ESET we believe that the positioning as a Challenger for the second year **validates our ability to provide an easy-to-use, comprehensive and consistent endpoint protection product** and is reflective of the increasing market share in all crucial segments for ESET, from Enterprise, SMB to Consumer. ESET prides itself on its high detection and small footprint; quality of customer service offering and believes its placement in the Gartner Magic Quadrant highlights its dedication to the highest possible service for all ESET clients.

Why customers trust ESET

"ESET **shares its knowledge and experience** of security in the broadest sense of the word. They are not just concerned with their own products, but with what they can truly do for the customer. ESET constantly contributes ideas that make a positive contribution. For example, ESET Threat Intelligence solution, which enables us to **examine phishing emails better and faster.**"

Why customers want to partner with ESET

We have the freedom of action to do always what we consider best for our customers.

SECURE

- No debts and no loans
- Not dependent on a single segment or a few big deals
- Evenly distributed revenue streams

&

PRIVATELY HELD

- Not for sale
- Neither dependent on, nor looking for investors
- No shareholder pressure to make a fast return on investment (ROI)

CHANNEL FOCUSED

- We're a channel focused IT security company. Our partners in every part of the world can rely on our long-standing experience supporting our partner network.

Canalys rates ESET as a champion for ongoing Improvements in channel processes, ease of doing business and making sustainable investments in the future of their channel models.

Why customers rely on ESET technology

“ESET Endpoint Security is **incredibly accurate** in identifying and discovering any security threat. The software has a design of accurately noticing any malicious content, that might harm your system. ESET Endpoint Security demands **little amount of installation effort**, unlike many other security aids which needs massive amounts. Finally, ESET Endpoint Security is a **customizable** application, and works effectively with other security measures.”

Data Administrator in the Finance Industry

“The biggest thing that stands out is its **strong technical advantage** over other products in the marketplace. ESET offers us reliable security, meaning that I can work on any project at any time knowing our computers are protected 100%.”

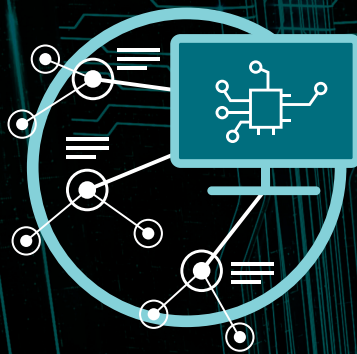

Fiona Garland, Business Analyst at Group IT

Our products and technologies stand on 3 pillars

ESET LIVEGRID®

Whenever a zero-day threat such as ransomware is seen, the file is sent to our cloud-based malware protection system – LiveGrid®, where the threat is detonated and behavior is monitored. Results of this system are provided to all endpoints globally within minutes without requiring any updates.

MACHINE LEARNING

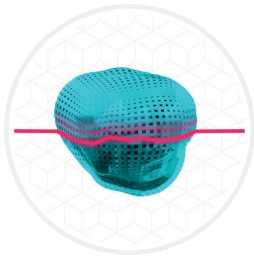

Uses the combined power of neural networks and handpicked algorithms to correctly label incoming samples as clean, potentially unwanted or malicious.

HUMAN EXPERTISE

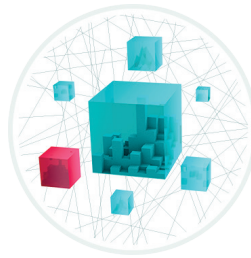

World-class security researchers sharing elite know-how and intelligence to ensure the best round-the-clock threat intelligence.

Explore ESET world-class technologies

ADVANCED MEMORY SCANNER

A unique ESET technology addressing heavy use of obfuscation and/or encryption. Monitors the behavior of a malicious process and scans it once it decloaks in memory.

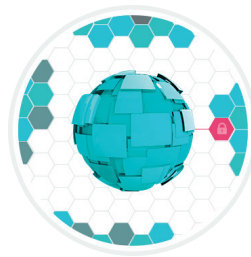

BEHAVIORAL DETECTION AND BLOCKING

Monitors system activity and uses a pre-defined set of rules to identify and block suspicious system behavior from carrying out potentially harmful activity.

CLOUD MALWARE PROTECTION SYSTEM

Unknown, potentially malicious applications and other possible threats are monitored and submitted to the ESET cloud via the ESET LiveGrid® Feedback System.

RANSOMWARE SHIELD

Monitors and evaluates all executed applications based on their behavior and reputation. Designed to detect and block processes that resemble behavior of ransomware.

What customers are saying about ESET's knowledge and expertise

“ESET Endpoint Security is a comprehensive antivirus solution which has **advanced security technologies**. In my organization, we use ESET Endpoint Security to protect our computers and servers from security threats. It has **better malware detection ratio** than other security solutions. It works well against malware and ransomware. It is **lightweight**, and it does not down system performance.”

“I can definitely say that ESET outscores its rivals regarding **technical support and ability**. Thanks to the expert professionals of ESET, we and our computers are safe.”

Ferit Semih Zeybekoglu, IT Manager at Tepe Corporate Services Group

Ground-breaking research

LOJAX

ESET researchers have discovered the first in-the-wild UEFI rootkit, dubbed LoJax. The research team has shown that the Sednit group (one of the world's most active APT groups) used different components of the LoJax malware to target government organizations in the Balkans and C&E Europe. UEFI rootkits are extremely dangerous tools for launching cyberattacks. They serve as a key to the whole computer, are almost impossible to detect and survive reinstallation of the operating system and hard disk replacement. ESET UEFI Scanner is one of the only tools on the market designed to detect malicious components in a PC's firmware.

GREYENERGY

Successor to BlackEnergy

eset ENJOY SAFER TECHNOLOGY™

GREYENERGY

ESET researchers have unmasked and analyzed a shadowy cyber-espionage group dubbed GreyEnergy. It's the successor to the BlackEnergy APT group which went 'underground' a few years ago after menacing Ukraine until about 2015. GreyEnergy is also closely related to TeleBots, responsible for NotPetya, perhaps the most devastating cyberattack experienced to date. Our researchers demonstrated beyond doubt that GreyEnergy's malware toolkit, capable of targeted attacks against critical infrastructure organizations, both mirrors and improves on already-sophisticated techniques used in the NotPetya attacks and Ukraine power grid outages.

ESET Endpoint Security cover the widest variety of endpoint operating systems. This endpoint protection product consistently rates very highly in terms of detection in independent malware detection tests. The product also is one of the top-performing, lowest impact endpoint security agents available in the market today.

FEEDBACK FROM OUR CUSTOMERS

What customers say about ESET's products

(According to Gartner Peer Insights for Endpoint Protection Platforms)

Simple initial implementation in a short time in cooperation with the manufacturer

<https://www.gartner.com/reviews/review/view/997546>

"We switched from another manufacturer to ESET. During last year's PoC (with several security vendors) and the implementation phase, we saw a high level of commitment from ESET.

There was a regular exchange and a strong cooperation during the implementation. Therefore, ESET's security software could be implemented on approximately 1000 devices within 6 weeks. (mainly Windows, but a few Macs).

The look and feel of the product appealed to us very much, the administration via the web console is very simple and self-explanatory in most places. ESMC offers a variety of configuration options, for example for reports, policies, automatic notifications, access rights, automation using client tasks. Due to the high configuration possibilities, however, it is sometimes difficult to find the right setting, for example when creating a

report. However, if you often work with the products, you will quickly get to know the possibilities. This has already improved from version 6.5 ERA to version 7 ESMC.

In general, the possibilities and clarity of Version 7 ESMC have increased considerably. A dashboard provides useful information about the infrastructure and security incidents.

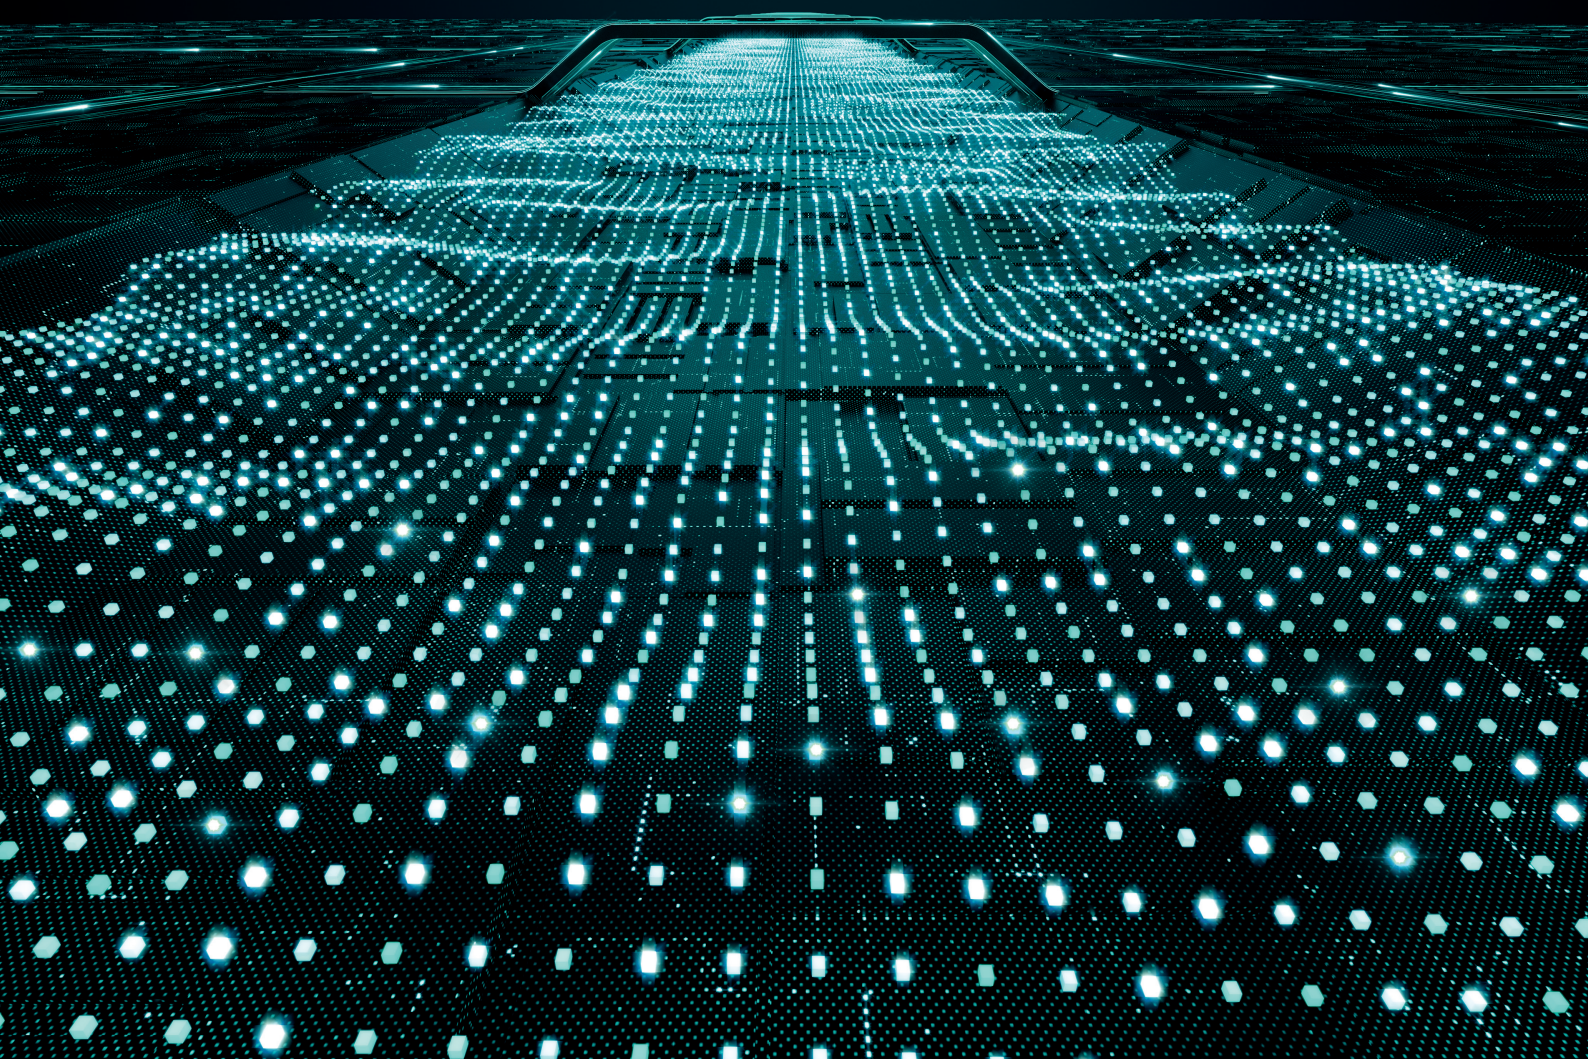

Another advantage is that all products share the same configuration logic, so you don't have to get used to administration when using multiple ESET products. The consoles of the ESMC, EES, EFS, EEI and ESA products are of the same design.

The products require few resources, scan processes can be optimized, so that for example automatic scanning is performed when the computer is not in use (e.g. lock screen). The scan times can also be further optimized by a small caching appliance (ESLC). All in all, we are satisfied with the ESET products."
